

Project 5 by Tong Xia:

How to run this project:

1. make
2. make test

The tests include all the criteria required from the instruction. For the error test, explained cases in comment.

How I implement this:

1. Add getType() methods for classes that related.
2. In order to get the correct linenum and charnum, add getMyLineNum() and getMyCharNum() to exp subclasses.
3. Design test cases.
